SEAN IBEZIAKO

Sugar Land, TX | sibeziako@gmail.com | linkedin.com/in/seanibeziako

PROFESSIONAL SUMMARY

Technical support and operations professional with experience in hardware diagnostics, identity and endpoint administration, inventory control, and distribution workflows. Combines analytical troubleshooting, service documentation, and cross-functional coordination to support reliable systems and accurate operations.

TECHNICAL AND OPERATIONS SKILLS

IT & Identity: Windows 10/11, Windows Server, Linux, Active Directory, Microsoft Entra ID, Intune, Microsoft 365, ServiceNow, PowerShell, DNS, DHCP, VPN, Group Policy

Operations & Analysis: warehouse systems, RF scanners, inventory reconciliation, order fulfillment, data analysis, reporting, asset tracking, issue escalation, root-cause analysis

PROFESSIONAL EXPERIENCE

Ingrasys (Foxconn Technology Group) - Test Technician Houston, TX | Feb 2026 - May 2026

- Investigated server test failures using diagnostic logs and hardware telemetry to isolate component, firmware, and connectivity faults; coordinated technical escalations with vendors.
- Directed incident triage for a 1,200-device environment, prioritizing critical issues and coordinating troubleshooting across desktop, network, and infrastructure teams.
- Built ServiceNow escalation workflows and knowledge articles, reducing average resolution time by 32% and improving first-contact resolution to 85%.
- Administered Active Directory and Microsoft Entra ID accounts, groups, access changes, and MFA issues using least-privilege practices.
- Coordinated Windows deployment and Intune policy updates across 400 endpoints; tracked compliance, patching, and remediation.
- Analyzed recurring hardware and network incidents, coordinated vendor follow-up, and reduced repeat failures by 25%.

Ferguson Enterprises - Warehouse Equipment Operator I Brookshire, TX | Dec 2024 - Nov 2025

- Compared picked items, SKU labels, and quantities with order records; investigated discrepancies with the team before staging shipments.
- Tracked inventory movements and storage locations using RF scanners and warehouse systems, helping align digital records with physical stock.
- Troubleshot scanner, printer, wireless, and workstation issues during warehouse operations; documented symptoms and escalated unresolved problems.
- Checked item availability and coordinated with warehouse staff on Will Call priorities, order exceptions, and customer questions.
- Operated warehouse equipment to move and stage materials, maintained organized work areas, and followed site safety procedures.

TECHNICAL PROJECTS

Active Directory Support Lab | GitHub repository

- Deployed and tested an isolated Windows Server domain with AD DS, DNS, DHCP, and routing/NAT; joined a Windows 10 client and verified user accounts and group membership.
- Used PowerShell to provision a test organizational unit, user, and security group; tested domain sign-in and an initial password change.

Network Connectivity Lab | GitHub repository

- Python tool for DNS resolution and single-port TCP checks; includes automated local-loopback, connection-failure, and invalid-input tests.
- Built and tested a Packet Tracer network with router, switch, IPv4 addressing, and ping connectivity checks. View example

EDUCATION

Texas State Technical College: Associate of Applied Science in Cybersecurity Technology
Western Governors University: Bachelor of Science in Information Technology
